Asia bond: a unique market

A blooming and diverse asset class backed by strong local investor base – Asian bonds offer compelling yields and sustainable income opportunities with high quality issuers.

Compelling yields opportunities

Asian credits offers relatively attractive credit spread and yield opportunities for income investors. Historically, the asset class offer higher yields than US and some of the developed market peers.

High quality issuers

Around 37% of the J.P. Morgan Asia Credit Index (JACI) are government or state owned¹ which typically benefit from government support, especially sectors considered systematically important to the economy (e.g. railway operators and utility providers).

Strong local investor base

Asian issuers with deep local history typically enjoy a strong and loyal investor base. The strengthened regional investor base is also a supportive factor to Asian dollar bonds to be more resilient to external shocks and capital outflows than in the past.

Capture Asian bond market opportunities

Attractive valuation emerging in Asian USD credits

Attractive valuations in Asian credits from a relative and historical basis are emerging as credit spreads have been widened. With relatively higher economic growth in the region that supports corporate financials, and monetary policy easing from China, we believe it an opportune time to capitalise on value opportunities from fundamentally strong issuers.

The above information may contain projections or other forward-looking statements regarding future events, targets, management discipline or other expectations. There is no assurance that such events will occur, and the future course may be significantly different from that shown here.

Credit spread of Asian IG and HY over the past 10 years

Source: Bloomberg, as of 28 February 2022. Asian HY bonds are measured by JPMorgan Asia Non-Investment Grade Corporate Index; Asian IG bonds are measured by JPMorgan Asia Investment Grade Corporate Index. Investment involves risk. Past Performance is not indicative of future performance. IG refers to Investment Grade. HY refers to High Yield.

Most of Asian local bonds offer relatively higher yields

Local bonds issued by China and some South Asian governments offer relatively attractive nominal and real yields. We believe steady COVID-19 vaccine rollout and more border reopening should provide a supportive backdrop.

The above information may contain projections or other forward-looking statements regarding future events, targets, management discipline or other expectations. There is no assurance that such events will occur, and the future course may be significantly different from that shown here.

Asian and developed markets 10-year government bond yield

Key features of Target Fund**

Primarily invest in investment grade with limited high yield exposure

An investment grade dominated portfolio with average credit rating at BBB (investment grade quality). Sovereign ratings of many Asian economies have upgraded over the past decade. Markets such as Philippines and Indonesia have transitioned from a high-yield to an investment grade issuer have upgraded over the past decade.

Most of Asian markets are now of investment grade quality

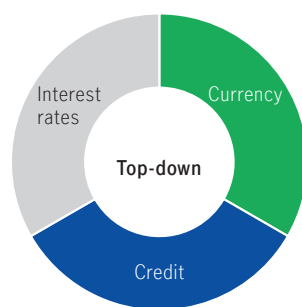

Source: Bloomberg, Foreign Currency Long-term Rating as of 31 December 2021.

Blended Asian bond portfolio

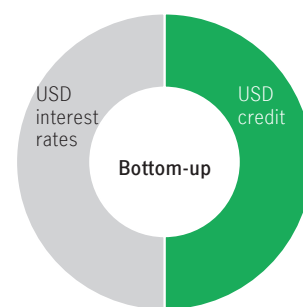

Flexible strategy allocating across USD and local currency Asian bonds to exploit investment opportunities in both markets. Local currency bonds which are predominantly issued by Asian governments offer investors top-down/macro-economic opportunities (e.g. interest rate cut cycles). Asian USD bonds which are predominantly issued by corporations provide us with bottom-up/bond picking opportunities.
